Statement of support
for the motion on
Strategy to halt the electrocution of birds by electrical infrastructure

The Committee for Animals of the State Council for Nature Conservation (hereinafter PROP) hereby confirms that, on behalf of and with the authorization of PROP, it supports the draft resolution on the electrocution of raptors and other birds for the IUCN World Congress 2016. **PROP agrees to co-sponsor this motion.**

PROP is aware of the impact of electrical infrastructure (by collision and electrocutions) not only on birds of prey, but on many other species of large birds. Therefore, it intends to support efforts to promote and implement appropriate mitigation measures that aim at reducing this threat. Accordingly, we authorize Dr. Adrian Lombard, President of the International Association for Falconry and Conservation of Birds of Prey, to submit this statement of support to the IUCN competent authorities and the IUCN World Congress.

Dr Sabina Pierużek-Nowak
Chair of the Committee for Animals
State Council for Nature Conservation
